

Sehwaaj Singh

Cloud • DevOps • Infrastructure • Security

Ludhiana, India | +91 98766 48277 | sehwaaj@gmail.com | Sehwaaj.com

PROFESSIONAL SUMMARY

Junior DevOps Engineer and Cybersecurity Practitioner experienced in AWS/Azure infrastructure, Linux administration, and Docker deployments. Skilled in centralizing log analysis using Wazuh SIEM and CloudWatch, securing CI/CD pipelines with automated vulnerability scanning, and writing Python scripts for operational tasks including automated VIN verification, log parsing, and system health checks. Experienced in troubleshooting network issues, configuring observability stacks, and automating threat response across cloud and virtualized environments. Focused on cloud security architecture, threat detection, and infrastructure reliability.

EXPERIENCE

Meander Software — Junior DevOps Engineer (Aug 2026 – Present) | DevOps Intern (Feb 2026 – Aug 2026)

On-site| Mohali, India

- Supported AWS and Azure environments across 3 live client projects, maintaining CI/CD deployment pipelines to achieve 95% build success rates in staging.
- Developed Python scripts to parse CloudWatch logs for error signatures and validate service health endpoints automatically.
- Assisted senior engineers with live deployments, basic system troubleshooting, and IAM security updates, earning an internal promotion from Intern to Junior Engineer.

Swift Freight — Documentation & Operations Automation (Feb 2026 – May 2026)

Remote | Canada

- Automated vehicle verification workflows using custom Python parsing scripts.
- Extracted and validated VINs, shipment metadata, booking/container identifiers, and vehicle specifications from operational loading sheets.
- Integrated VIN decoding and validation workflows to detect invalid records, fuel-type mismatches, and operational inconsistencies.
- Processed and verified 3,000+ vehicle records with ~95% operational accuracy while reducing manual validation effort through automation workflows.

PROJECTS

Cloud-Native IPL Analytics & Prediction Platform

Next.js • FastAPI • Docker • AWS EC2 • Nginx • Prometheus • Grafana

- Built and deployed a full-stack IPL analytics platform using Next.js, FastAPI, Docker, and AWS EC2.
- Designed reverse-proxy architecture using Nginx with HTTPS enabled via Let's Encrypt and Certbot.
- Containerized frontend/backend services using Docker Compose for reproducible deployments and isolated networking.
- Implemented observability stack using Prometheus, Grafana, and Node Exporter for infrastructure monitoring.
- Developed analytical APIs using FastAPI, Pandas, NumPy, SQLite, and Scikit-learn.
- AWS Multi-Layer Cloud Security & Automated Threat Mitigation

AWS CloudTrail • CloudWatch • SNS • Lambda

- Built a real-time cloud security monitoring system to detect high-risk account, IAM, and infrastructure activity.
- Created CloudWatch metric filters and alarms for root usage, IAM changes, security group modifications, and authentication failures.
- Implemented composite alarms and SNS-triggered Lambda functions to automate remediation actions.
- Designed CloudWatch dashboards to visualize security posture, alerts, and remediation outcomes.

Secure CI/CD Pipeline for AWS Lambda (DevSecOps Project)

GitHub Actions • AWS Lambda • Trivy

- Built a secure GitHub Actions CI/CD pipeline for AWS Lambda with security gating and automated deployment.
- Integrated Trivy vulnerability scanning to block deployments on High/Critical findings.
- Implemented protected branch workflows with required PR-based reviews and status checks.
- Managed secret handling using GitHub Secrets and evaluated secret-scanning controls.

Personal Cybersecurity & Infrastructure Home Lab

Wazuh • Snort • Proxmox • HAProxy • Networking

- Deployed and managed Wazuh SIEM with Windows and Ubuntu agents for centralized monitoring and alert analysis.
- Configured Snort IDS with custom rules and deployed Cowrie honeypot to analyze attack behavior.
- Implemented HAProxy load balancing with health checks and failover testing to simulate high-availability systems.
- Built enterprise-style network simulations using RIP, OSPF, EIGRP, VLANs, DNS, DHCP, mail servers, and secure tunnels.
- Investigated system and network alerts, analyzed logs, and identified root causes using SIEM and packet analysis tools.

SKILLS

- Cloud & DevOps:** AWS (EC2, S3, CloudFront, IAM, Lambda, CloudWatch, CloudTrail), Azure, Docker, Docker Compose, Nginx, Prometheus, Grafana, CI/CD Pipelines, GitHub Actions, Linux Administration
- Security & Monitoring:** Wazuh SIEM, Snort IDS/IPS, Cowrie Honeypot, Wireshark, Incident Detection, Alert Triage, Traffic Analysis, Infrastructure Monitoring
- Development & Automation:** Python, FastAPI, Next.js, REST APIs, SQLite, Pandas, NumPy, Scikit-learn, Workflow Automation
- Networking & Systems:** Proxmox, HAProxy, DNS, DHCP, VLANs, TCP/IP, RIP, OSPF, EIGRP, Linux Troubleshooting

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science

PCTE Group of Institutes, Ludhiana, India Aug 2022 – Jun 2026

CERTIFICATIONS

- 3-Month Ethical Hacking Certificate** – CyberSec Guru, Ludhiana
Focus: Penetration testing, OSINT, RAT simulations, Kali Linux tools
- 6-Week Networking Training** – Solitaire Infosys, Chandigarh
Focus: Network fundamentals, routing, switching, IP subnetting, LAN/WAN configuration
